

TFK programme, funded projects 2025

Project title: Equality in Diabetes Care	
Coordinator Seinäjoen Ammattikorkeakoulu Oy Pauliina Oja-Lipasti, pauliina.oja-lipasti@seamk.fi	Diabetes is one of the fastest-growing health challenges worldwide. In Thailand, where the prevalence has risen from 7.3% in 2009 to 10.9% in 2024, the national healthcare system offers screening and treatment under universal health coverage. However, individuals in correctional facilities—a population of over 280,000—often face serious gaps in diabetes care due to limited resources, lack of trained staff, and absence of tailored care models. The DEqual project aims to address this critical gap through international educational cooperation. Partnering Finnish and Thai higher education institutions (HEIs)—Seinäjoki University of Applied Sciences (SEAMK), Tampere University of Applied Sciences (TAMK), and Chulalongkorn University (Chula)—will co-develop a new diabetes care training program tailored specifically for future and current nurses working in prisons and other resource-limited environments. Using a blend of digital modules and in-person learning, the project will create and pilot an innovative Master level 5 ECTS course called 'Diabetes Care in diverse Environments' on diabetes prevention and management in correctional settings. The course will be tested in two rounds with 32 Thai & Finnish nursing students and practicing nurses from Thailand, and will include intensive study weeks in Finland and Thailand. Finnish best practices—such as nurse-led patient coaching and digital education—will be adapted to meet the realities of Thai healthcare institutions. The project also promotes broader goals: supporting public health equity, advancing the global knowledge exchange between higher education systems, and preparing healthcare professionals to deliver quality care in underserved settings. This initiative is part of the Team Finland Knowledge (TFK) Programme 2025, which promotes educational innovation, global cooperation, and sustainable development. By integrating the new course into nursing curricula, sharing open-access materials, and engaging policy stakeholders like Thailand's Ministry of Public Health and Department of Corrections, the DEqual project ensures its impact lasts well beyond the pilot phase. Ultimately, DEqual empowers students, educators, and healthcare workers to tackle diabetes where it's needed most - ensuring that quality care truly reaches everyone, no matter where they live or work.
Partners Tampere University of Applied Sciences TAMK, Chulalongkorn University
